Licensed Vet Tech

Overview

Join our Spay/Neuter Clinic as a Licensed Veterinary Technician and help deliver attentive, skilled support to animals and the people who care for them. You'll assist a veterinarian with procedures and treatment while helping patients remain safe and comfortable. Your impact: Careful monitoring and timely communication help veterinarians make informed decisions and support better care for patients and reassurance for their families.

Responsibilities

- Support veterinary procedures, including surgical assistance, anesthesiology, general anesthesia, and veterinary anesthesia monitoring.
- Provide animal care, husbandry, medication administration, animal catheterization, vascular access, and intravenous (IV) insertion; perform phlebotomy and laboratory work.
- Handle and restrain animals safely; communicate clearly with clients about care and procedures.

Qualifications

- Required: Current veterinary technician licensure applicable to the role and veterinary technician experience. Demonstrated veterinary experience, animal handling, and dog handling skills are important.
- Knowledge of veterinary terminology, dental terminology, animal anatomy, and animal physiology; experience with pet care and animal restraint.
- Relevant experience may include kennel work, veterinary critical care, veterinary emergency care, veterinary surgical assistance, veterinary procedure assistance, laboratory work, radiology diagnostics, anesthesiology, or anesthesia monitoring.

Work Location: In person
